The color of our eyes and our hair are family traits. How tall we are, how big or small we are, and the shape of our face are all family traits. We say that we inherit these traits from our parents.

Look around you. Many people have the same color eyes or color of hair, but they all look different. It's the special combination of all of these common traits that makes us special. No one else has the same combination of traits that we do.
