Tornadoes happen all over the world. There's even a place called Tornado Alley. Josh Wurman studies extreme weather. He joined a team of other scientists to study tornadoes in Tornado Alley. One day, the blue sky turned black. A giant cloud came toward the team. The cloud had winds that moved in a circle. Inside his truck, Wurman watched the storm through his window and on his instruments. Colors on the computer screen showed where the rain fell and where the wind was the strongest.

The winds twisted the storm tighter and tighter into the shape of a funnel. When the funnel touched the ground, it became a tornado! The tornado looked like a giant, gray elephant's trunk. It moved one way, then another way. As the tornado moved across the ground, the team came dangerously close. They dropped special instruments close to the storm. These instruments showed wind speed, temperature, and how much rain was falling.
